$$\triangle$$
AHO: $S_P = S_s$; $α_P < α$; $T_s = 2T_P$

HAŬTU: $\frac{Q}{Q_P} - ?$

PEWEHUE:

$$\frac{1}{S_{p}} = \frac{1}{T_{p}} - \frac{1}{T}$$

$$\frac{1}{S_{s}} = \frac{1}{T_{s}} + \frac{1}{T}$$

$$\frac{1}{2T_{p}} = \frac{2}{T} \implies T = 4T_{p}$$

$$\frac{T^2}{T_p^2} = \frac{Q^3}{Q_p^3} \quad (II 3AKOH KENNEPA)$$

$$\frac{Q}{Q_P} = \left(\frac{T}{T_P}\right)^{\frac{2}{3}} \approx 2.5$$
